

VIVO AQUATICS

VivoFlow

Every Drop, Accounted For.

VivoFlow helps you track water usage, uncover hidden issues, and catch leaks across your facility – before they turn into repair bills, structural damage, or a spike on the water bill.

CHALLENGE

Most facilities don't catch issues until the damage is already done. Operating budgets are feeling the strain from escalating water costs—including both supply and sewage—expenses linked to chemical treatments, legal issues and damages to your property.

SOLUTION

VivoFlow alerts you to leaks and issues proactively before structural issues happen.

Pools, spas, and cooling towers today, with room to measure whatever else drives usage at your property. Your team sees consumption in gallons and in dollars once you enter your utility rate, and a sudden spike surfaces on the dashboard instead of on next month's bill.

VivoFlow offers efficient water management and leak prevention all in VivoPoint.

"VivoPoint makes your data usable. The graphs, the insights, the visibility, it's a game-changer."

Jeremy Stiles, VP of Risk Management,

KEY BENEFITS

Unlock Water Savings

Pinpoint sources of waste and inefficiency to lower usage and cut water costs.

Protect Your Property

Catch excessive usage early to limit water loss and avoid costly repairs from leaks.

Alerts & Notifications

Get notified when water consumption spikes or crosses a custom-set threshold.

Predictive Analytics & Benchmarks

Use historical data to anticipate future usage and plan ahead.

Continuous Monitoring & Tracking

Track usage as it happens, so your team can act before waste adds up.

Future-Proof Your Business

Build the sustainability practices your business will need.

HOW IT WORKS

1 LoRaWAN Gateway

Collects data wirelessly from connected sensors and meters to send to VivoPoint over cellular.

2 Pulse Counter

Attaches to the water meter and transmits consumption to the gateway over LoRaWAN.

3 Water Meter

Installs directly on the water line to track usage continuously. We can also connect to an existing meter with a pulse output.

Ready to take your aquatics operations to the next level?
